OLD VIENNA WITH PAVER-SHIELD™

Now with paver-shield™ technology; this antique clay surface will bring a beautiful look and feel to borders, edging, inlays and anywhere you feel creative!
INSTALLATION GUIDELINES: SAND
After excavation, compact the sub grade and install a woven separation fabric. Spread and compact a base of clean, graded, dense aggregate (road base). Typical compacted base thickness is 4-6” for pedestrian applications. Pavers are set on a loosely screened 1” bed of graded, clean concrete sand. Maintain a joint size of 1/16” – 3/16”. When pavers are set, compact paving stones into sand with mechanical plate vibrator. Joint sand may be spread over paving stones during compaction. Installed pavers should be set 1/8” to 1/4” above final elevations to compensate for any potential settlement. Spread clean dry sand over surface and broom sweep to fill joints.

CROSS-SECTION OF TYPICAL INSTALLATION

Pavers should slope slightly away from building for water drainage

Pedestrian Traffic 4” – 6” compacted aggregate

1” Bedding Sand
