STONE RIDGE

paver-shield™ has a tight, smooth surface texture and will not expose heavy aggregate as it wears. Ultra-dense surface has more color and more protection. Nicolock has color from top to bottom throughout the paver ensuring a lifetime of beauty. Iron oxide pigments are guaranteed not to fade!

Stone Ridge | Color: Westchester Blend
**INSTALLATION GUIDELINES: SAND**

After excavation, compact the subgrade and install a woven separation fabric if needed. Spread and compact a base of clean, dense graded aggregate (road base). Typical compacted base thickness is 4-6” for pedestrian applications. Pavers are set on a loosely screened 1” bed of graded, clean concrete sand. Maintain a joint size of 1/16” – 3/16”. When pavers are set, compact paving stones into sand with mechanical plate vibrator. Joint sand may be spread over paving stones during compaction. Installed pavers should be set 1/8” to 1/4” above final elevations to compensate for any potential settlement. Spread clean dry sand over surface and broom sweep to fill joints. Run vibrator one final time after filling joints.

**NOTE:** All measurements are nominal. Variance in square footage or linear footage coverage can be up to 5% depending on joint width. The possible occurrence of efflorescence does not affect the structural integrity of the product. Efflorescence is a normal occurrence in concrete products and will dissipate with normal weathering. The use of concrete as a base or setting bed may increase the possibility of efflorescence.

**CAUTION:** Always use a plate compactor with a pad when installing any textured paving stone.
