FEATURES
- Slightly dimpled surface
- Textured edges

COLOR SELECTION
- adobe blend antiqued
- charcoal antiqued**
- granite city blend antiqued
- golden brown blend antiqued
- terra cotta blend antiqued
- autumn blend antiqued*
- bayberry blend antiqued*
- crab orchard blend antiqued*
- marble blend antiqued*
- oyster blend antiqued*

INSTALLATION GUIDELINES: SAND

After excavation, compact the subgrade and install a woven separation fabric. Spread and compact a base of clean, graded, dense aggregate (road base). Typical compacted base thickness is 4-6" for pedestrian applications. Pavers are set on a loosely screeded 1" bed of graded, clean concrete sand. Maintain a joint size of 1/16" – 3/16". When pavers are set, compact paving stones into sand with mechanical plate vibrator. Joint sand may be spread over paving stones during compaction. Installed pavers should be set 1/8" to 1/4" above final elevations to compensate for any potential settlement. Spread clean dry sand over surface and broom sweep to fill joints.

NOTE: All measurements are nominal. Variance in square footage or linear footage coverage can be up to 5% depending on joint width. The possible occurrence of efflorescence does not affect the structural integrity of the product. Efflorescence is a normal occurrence in concrete products and will dissipate with normal weathering. The use of concrete as a base or setting bed may increase the possibility of efflorescence.

CAUTION: Always use a plate compactor with a pad when installing any textured paving stone.

*C denotes premium color
**charcoal and marble not available for Country Combo

CROSS-SECTION OF TYPICAL INSTALLATION

Pavers
Pavers should slope slightly away from building for water drainage
Pedestrian Traffic
4" – 6" compacted aggregate
1" Bedding Sand
